

CASE STUDY

Global Leader in Content Marketing Platform Migrated From GitLab to GitHub

Location: USA

Industry: Marketing & Advertising

THE CHALLENGE

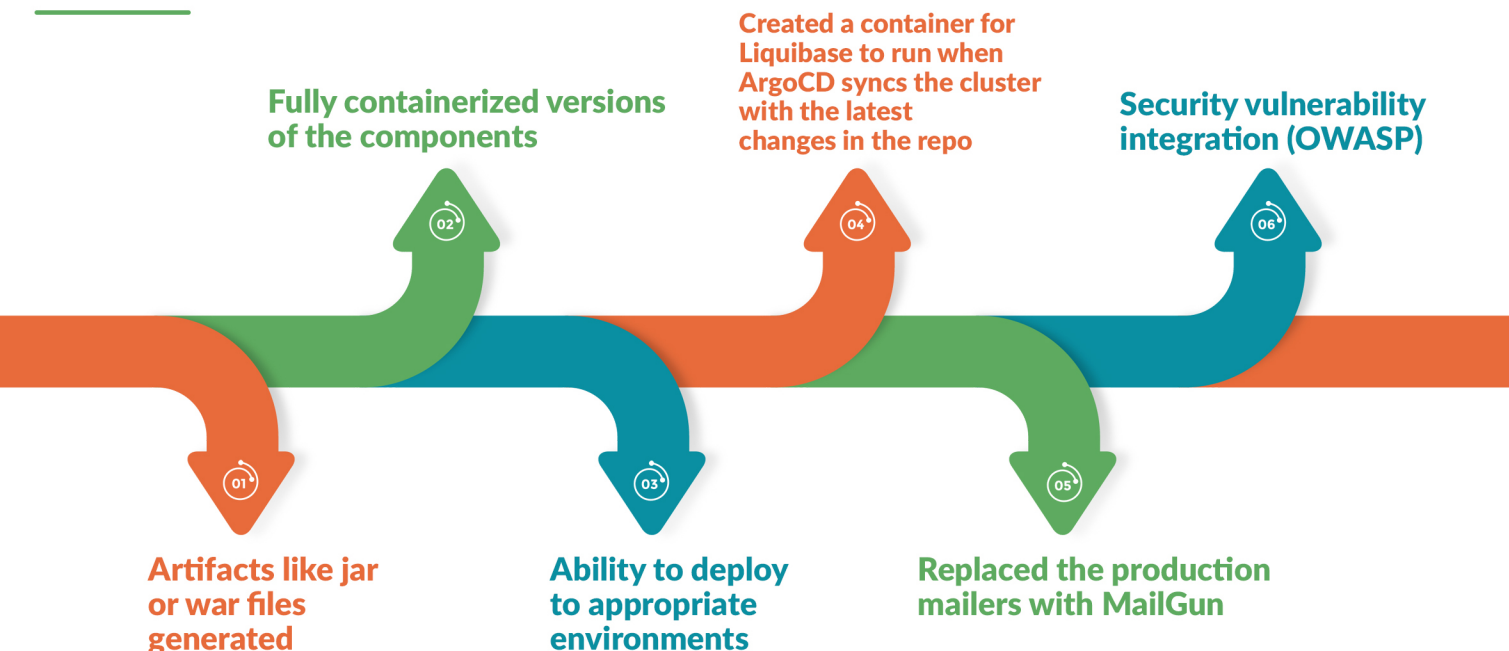

The client was using GitLab for their projects and faced the following challenges :

- 1** Inability to host everything on GitLab.
- 2** Their client's team was familiar with GitHub and onboarding them on Gitlab was taking much effort.
- 3** Gitlab's slack integration wasn't efficient.

THE SOLUTION

- AAIC worked with the client's technology and IT team. Based on the below migration process, the entire migration planning and execution was done.
- Using the importer, we imported GitHub repositories to the GitLab instance.

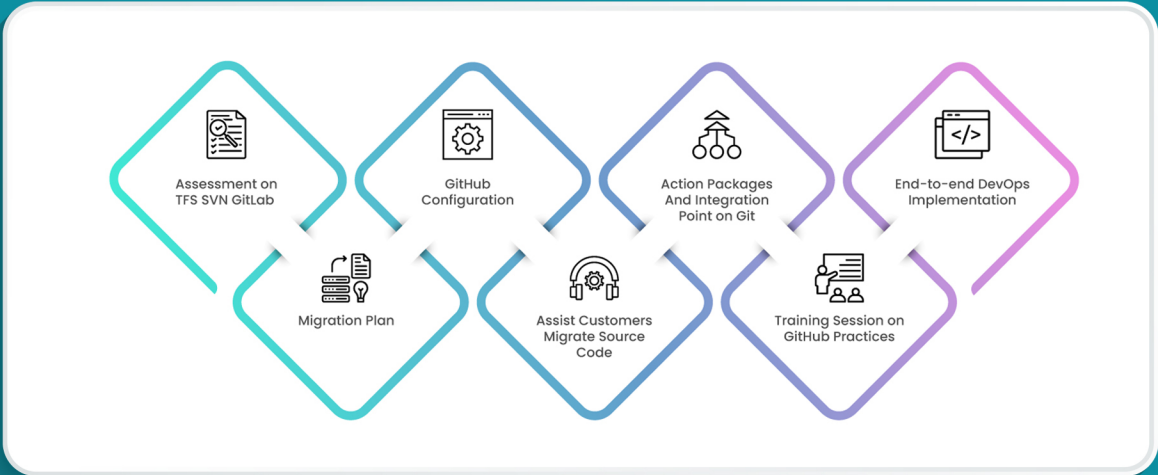

KEY ASPECTS

TECHNOLOGY IMPLEMENTATION

TGitHub Importer, Docker, Liquibase, ArgoCD, OWASP, MailGun

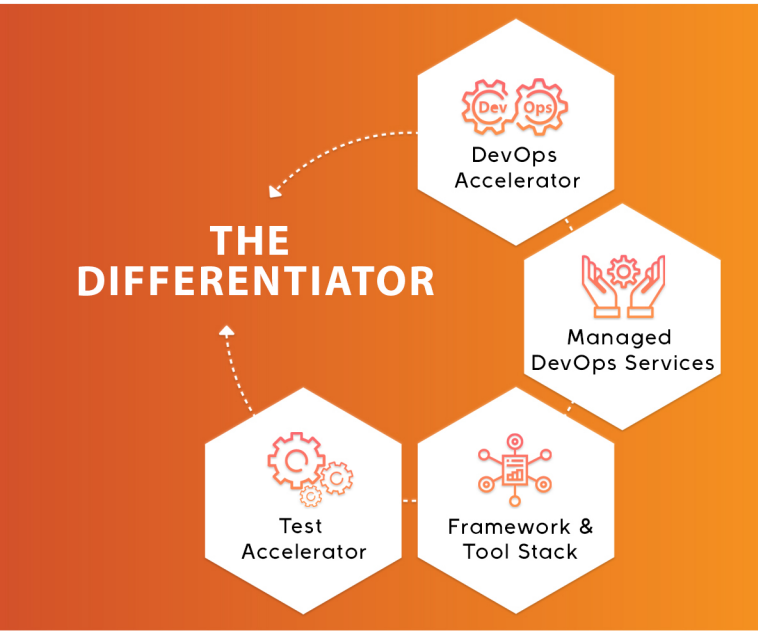

THE MIGRATION PROCESS

AAIC MIGRATION SERVICES

THE OVERVIEW

- ▶▶ AAIC has plenty of AWS migration experts.
- ▶▶ AAIC certified cloud engineering team provides the needed expertise and service to move your on-premise data center to **AWS Cloud**. We take the code from existing version control to open source library GitHub, debug and make it operational on AWS.
- ▶▶ During the entire 5 step process, AAIC solution architects and cloud engineering team worked closely with the client team to deliver a **secure**, **scalable**, and **performant solution** post-migration.

THE FEATURES

We have a proven strategy on fast and effective component migration which bring the utmost efficiency and scalability to your business that includes
